Unimplemented Functionalities and Reasons

Functionality 1

Description: The system allows a separate TA role for accessing the portal.

Reason: We were not able to formulate a working logic for this functionality. A TA requires partial access of both instructor and student, making access-control logic difficult to model within the current architecture.

Functionality 2

Description: The system allows users to save changes made on a previously created whiteboard file.

Reason: The updated text or drawings on an existing whiteboard were not saved correctly. The changes did not reflect properly upon reopening the file.

Functionality 3

Description: The system allows group submissions, preferably by a group leader.

Reason: Due to time limitations in the planned sprint flow, we were unable to design and implement this feature.
